

DFU for MacOS

User Manual

目錄

1. Introduction	3
2. APP	4
3. Revision History	5

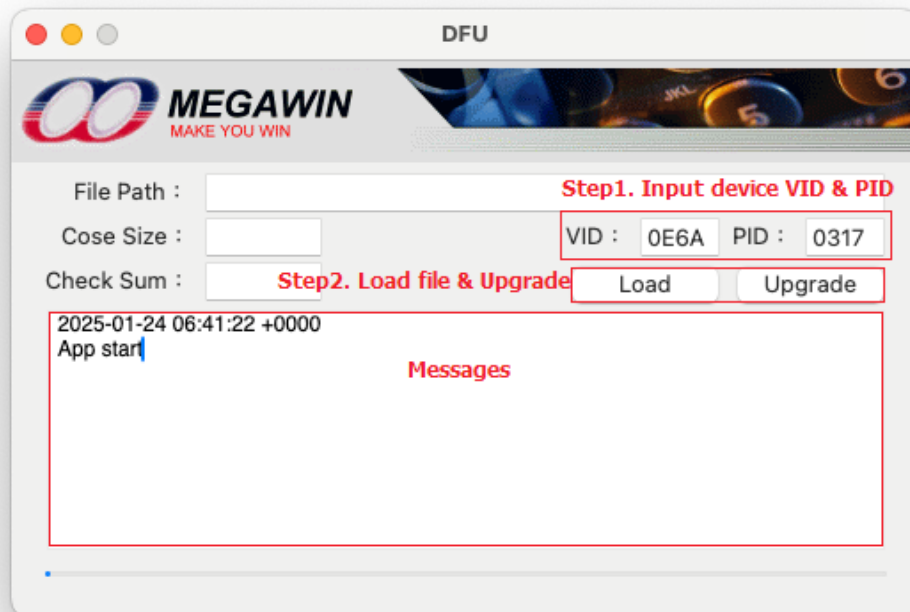

1. Introduction

DFU (Device Firmware Upgrade) can perform Firmware Upgrade directly through USB Cable, without reconnecting Device, by taking some simple steps.

PS. Minimum deployments : MacOS 11.5

2. APP

Please note that when you open the APP, the system will warn you that the program is not signed. You need to go to "System Settings->Privacy and Security" to enable the permissions of "Allow unknown developers" and "Input monitoring".

3. Revision History

Revision	Description	Date
v0.9.0.0	Initial version	2025/01/24
v1.0.0.0	Notarized DFU.app	2025/06/11
